

Participation of government in the capital of corporations

Data for 2014	Value of government participation (in % GDP)
A. Public corporations	12,02%
B. Private corporations	2,73%

Notes to table:

The capital of corporations is defined as the equity reported in the individual financial statements of corporations. For the corporations partially owned by general government, only the part of equity corresponding to the government participation in the capital was taken into account. The minimum threshold for equity size was applied, data for corporations was included in the calculations only if the ratio of public ownership of the capital was 20 % and more. Corporations classified within the general government sector were excluded from calculations.

For 2014, data was available for all 69 corporations controlled by central government. Data was available for 335 corporations controlled by local government out of 557.

For the purposes of this table, the public corporations are those with the government participation in the capital at least 50 %. The corporations are classified as private with the government participation in the capital lower than 50 %.
